The Third International Conference on Big Data, Small Data, Linked Data and Open Data

<http://www.iaria.org/conferences2017/ALLDATA17.html>

We are surrounded by data of different nature, form and content. Essentially, there are two types of data: open data and proprietary data. Open data are issued under an open license, which generally authorizes reuse and distribution. Proprietary data, instead, belong to a company or to a specific person, and generally, their license prohibits their use or allows the use of a small part, with some restrictions. This is the case of data derived from social media, such as Facebook or Twitter.

This track aims at investigating the difference between data extracted from social media and open data. In addition, it tries to establish a comparison between data derived from social media, which usually are not open, and data extracted from open data, in order to understand whether or not most of data are of public domain.

Topics of interest include, but are not limited to, the following (listed in no particular order):

- A qualitative/quantitative analysis of data available on social media and/or open data
- A comparison between social media and open data
- Licensing problems connected to the publication of data extracted from social media
